

Weekly Insights 20 Jan 2022: Oil is the shining star for the MENA region amid weak labour market recovery

Weekly Insights 20 Jan 2022: Oil is the shining star for the MENA region amid weak labour market recovery

1. ILO's labour market outlook for the MENA region is weak and uneven

- Covid19 led to **substantial losses in working hours & a net decline in employment**, especially in North Africa (yet to recover to pre-Covid levels). The ILO estimates that youth accounted for ~1/3-rd of net job losses in N. Africa (share in employment is 11%)
- **Even pre-Covid, Arab States were characterised by low LFPRs and Employment to Population ratios (EPRs)**, alongside high unemployment & labour underutilisation. **GCC sees a faster recovery in the labour market** & EPR is slowly ticking up

	Ratio of total weekly hours worked to population aged 15–64 (%)					Total weekly working hours in full-time equivalent jobs (FTE = 48 hours/week) (in millions)				
	2019	2020	2021	2022	2023	2019	2020	2021	2022	2023
North Africa	18.8	16.8	17.5	18.2	18.4	58.0	53.0	56.0	59.0	61.0
Arab States	22.1	19.9	20.5	21.2	21.5	49.8	45.9	48.3	51.1	53.0
GCC	30.5	27.5	28.5	29.6	30	27.6	25.3	26.5	27.9	28.7
Non-GCC Arab States	16.5	14.9	15.3	15.8	16.1	22.2	20.7	21.7	23.1	24.3
	Employment to population ratio (%)					Employment (millions)				
North Africa	39.3	37.3	37.4	37.9	38.2	64.0	62.0	63.0	65.0	67.0
Arab States	47.1	45.7	45.7	46.4	46.8	53.5	53.2	54.5	56.6	58.6
GCC	64.3	63.1	63.1	64.1	64.9	28.9	28.9	29.4	30.4	31.2
Non-GCC Arab States	35.8	34.4	34.5	35.1	35.6	24.6	24.3	25.1	26.3	27.4

2. FDI into West Asia jumps in 2021, thanks to cross-border M&As

- The **UNCTAD's** latest [Investment Trends Monitor](#) shows a **77% yoy jump in global FDI to an estimated USD 1.65trn in 2021**; developed nations' FDI grew to USD 777bn (3-times FDI in 2020)
- The report finds that **project finance in infrastructure** now exceeds pre-pandemic levels across most sectors; boom in **cross-border M&As is most pronounced in services**
- **Uptick in West Asia**, where FDI rose by 49% to USD 90bn. **Inflows to Saudi Arabia quadrupled** to USD 23bn, in part due to an increase in cross-border M&As
- **Inter-Arab investments (2020, data from Dhaman): UAE, Saudi Arabia & Bahrain** together accounted for more than 75% of the number of inter-Arab investment projects & **close to 90% of the total capex in 2020**

3. Inter-Arab FDI flows into “new” sectors: restricted to pandemic years or a shift?

Sector composition of inter-Arab FDI flows shifted in 2020 (data from Dhman) with a **major fall in the share of real estate sector**

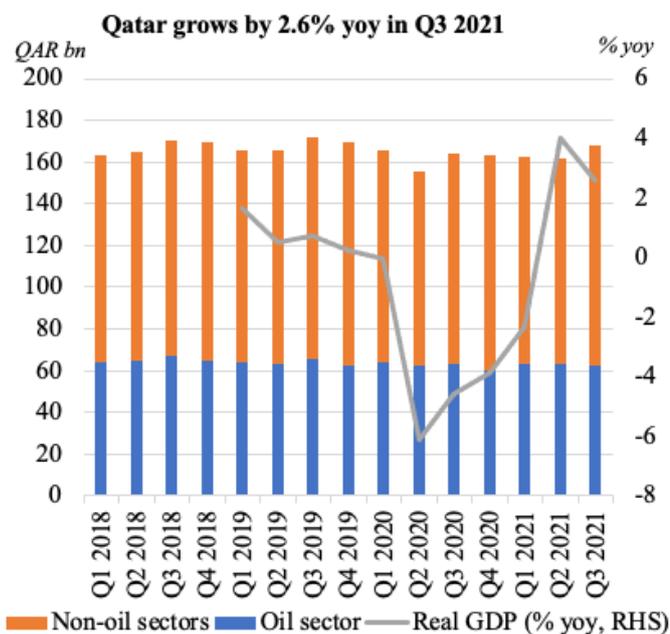

- **Rise in renewable energy projects** (both in number and value): one of the top 5 inter-Arab projects in 2020 was the water desalination plant project in Abu Dhabi
- **Investments into “services” increased:** financial services (14% in 2020 vs 1.7% in 2018), business services (8% in 2020 vs 1.6% in 2018), communication and business services (18% and 8% respectively in 2020)

4. Qatar GDP grows by 4% qoq in Q3 2021, thanks to non-oil sector recovery

- **Qatar GDP grew by 2.6% yoy and 4.0% qoq in Q3 2021.** Growth was supported by the non-oil sector (+4.7% yoy) while the mining & quarrying sector activity dipped by 0.7%.
- Among non-oil sectors, **those that were hit hardest by Covid19 recovered the most**, hospitality & transportation (both up by 30% yoy)

5. Kuwait deficit slips to KWD 682.4mn in Apr-Dec 2021 due to higher oil revenues

- **Kuwait's total revenue in Apr-Dec 2021**, at KWD 11.5bn (USD 38.1bn), **surpassed the total revenue collected in the last fiscal year** Apr 2020 – March 2021 (KWD 10.52bn)
- **Oil revenues accounted for 88% of the total revenue** collected in the first 9 months of 2021
- Spending cuts (reducing private sector wage subsidies, restraining non-essential spending etc) and withdrawal of Covid19 related fiscal measures has slowed expenditure
- Given the sharp rebound in oil prices, there has been a **significant improvement in fiscal balance**: a deficit of

KWD 682.4mn was recorded in Apr-Dec 2021, down from the KWD 10.8bn deficit last year

6. Oil price: is USD 100 a barrel too far off? A price above USD 80 is likely to be short-lived

Oil prices hit a 7-year high on Tuesday this week. Many factors have led to this increase:

(A) On the demand side:

- **Demand for oil has held up**, in spite of the spread of Omicron (many nations in Europe are still reporting highest daily cases, but elected to avoid lockdowns)
- **Fears about the variant are diminishing**. To take air travel as an example: even after initial news about the new variant broke (on 24th Nov), air travel bookings made for Dec performed better than those for travel in Nov (51% and 46% of 2019 levels respectively, according to IATA). International travel bookings show a slowdown, but demand for summer travel is rising
- **China's zero-Covid policy could derail oil demand**, but only if its city-lockdowns are extended over a longer period across the nation (e.g. during Winter Olympics or Lunar New Year)

(B) Supply issues are varied:

- **Tight short-term supply**, given concerns about production & spare capacity: increase in OPEC oil output has

undershot the monthly target (given outages and downtimes in Libya, Nigeria...); snails pace of Iran's nuclear deal negotiations (unlikely to get Iran's exports on board this quarter or next)

- **Shale oil could come into play if prices rise further;** for now, production is still low given supply chain issues & high overheads
- **Geopolitics:** Russia-Ukraine tensions & recent attack on fuel depot in the UAE (following which oil firm ADNOC tweeted that business continuity plans had been activated to ensure supply was not disrupted) add a new layer of uncertainty to energy markets

The Fed is expected to raise rates this year in a bid to reduce inflation & **higher oil prices will only feed further into food, hospitality and consumer goods prices among others,** leading to demand for higher wages => an inflationary spiral
