Weekly Insights 10 Jun 2022: Accelerating economic activity in the GCC, but inflation starting to bite

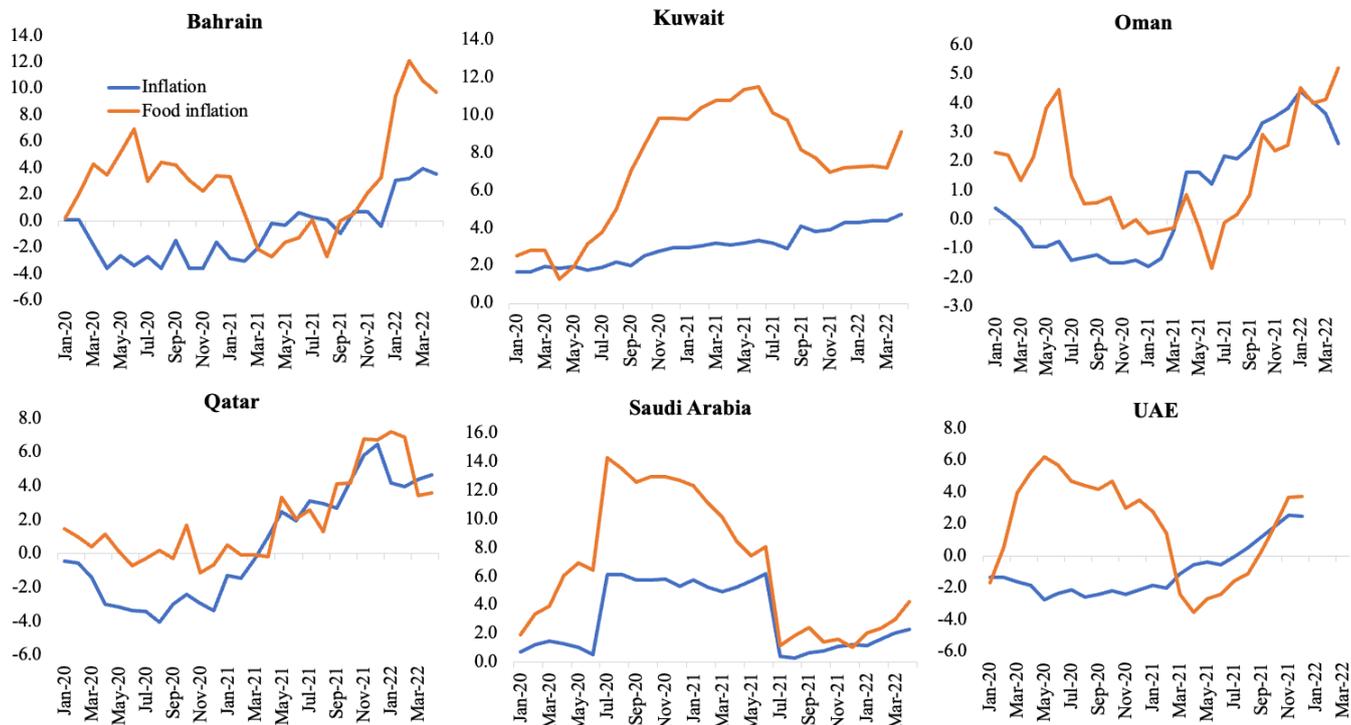

Source: Refinitiv Datastream. Chart by Nasser Saidi & Associates

## 1. PMIs highlight increased activity, new orders in the GCC; inflation on the rise across the Middle East

- **Divergence in PMI readings in the GCC and rest of the Middle East continues** straight month in May, UAE and Saudi 21 & Dubai's 18<sup>th</sup> Qatar expanded for the 23<sup>rd</sup> while Egypt's readings have been sub-50 for ~1.5 years
- **overall** have seen slight improvements in recent months, but **Egypt and Lebanon** (new orders in Egypt fell the most since Jun 2020; exchange rate woes in Lebanon add on to slow pace of increase in output, new orders). However, **expectations remain pessimistic** (in both nations) and economic/ political reform (in Lebanon)
- **Buying Businesses across the Middle East are confronted with rising input costs.** levels have slowed as firms prefer to draw down on inventories. UAE remains an outlier where more firms prefer not to pass on higher input costs to customers (increasing competition, but affecting firms' profits)

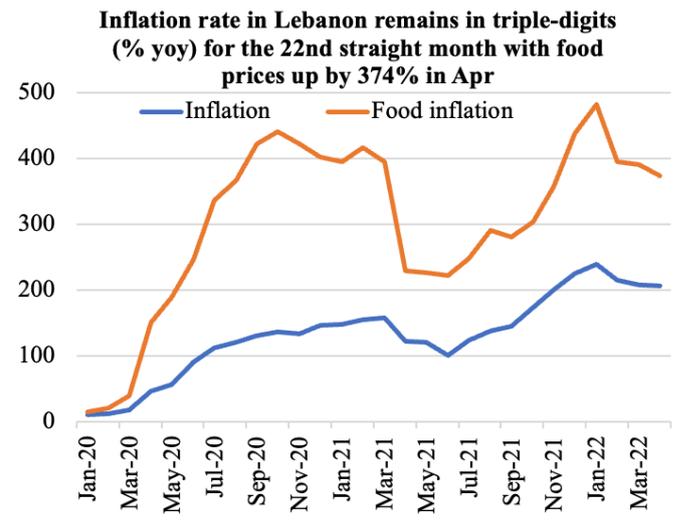

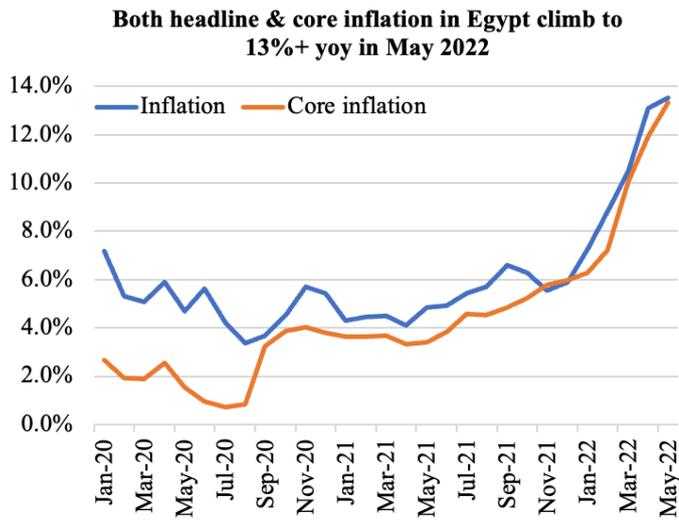

## 2. Inflation rates rising across the GCC; fuel prices have surged by 50%+ in the UAE since end-2021 (costs double vs Oman)

Source: Refinitiv Eikon; Charts by Nasser Saidi & Associates  
 Note: Latest available data is for Apr 2022 except UAE (Dec 2021)

## 3. Severe inflation concerns in Egypt & Lebanon, given size of imports & exchange rate depreciation

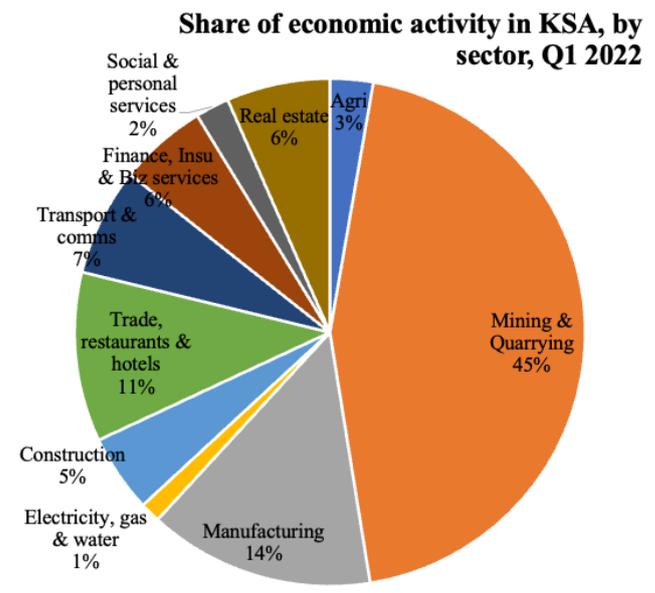

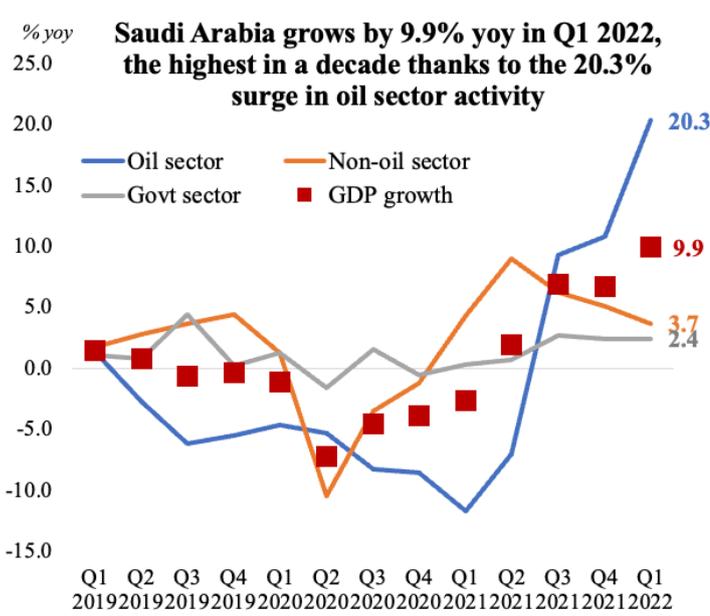

- driven by a **Egypt's inflation climbed to 13.5% yoy in May – the highest in 3 years** surge in food and beverages prices (24.8%) and the recent devaluation. Core inflation also touched 13.3% in May (Apr: 11.9%). With the central bank's inflation target at 7% ( $\pm 2\%$ ), a rate hike seems almost certain at the meeting on June 23
- – to the lowest level **Lebanon saw a slight moderation in Apr inflation in yoy terms** **Inflation & exchange rate depreciation act as a tax on income (reducing real wages) and a massive wealth tax.** In the absence of implementation of reforms (to receive a support package from the IMF), the economic crisis seems to be dragging on; further increases in the costs of living will put pressure on the population => increase in poverty, food poverty & inequality
