

Comments on “The ebb and flow of Saudi Arabia’s US Treasury strategy” in Arab News, 25 Oct 2025

Dr. Nasser Saidi’s comments appeared in an Arab News article titled “[The ebb and flow of Saudi Arabia’s US Treasury strategy](#)” published on 25th October 2025.

The comments are posted below.

Nasser Saidi, founder and president of Nasser Saidi & Associates, a specialized economic and financial advisory services company, echoed this perspective, emphasizing that the decision is “primarily taken by the Saudi Central Bank, keeping in mind its strategic goals of currency stability, directed partly by the need to hold US dollar as part of international reserves to maintain the dollar peg and liquidity and safety.” For Saidi, who served as Lebanon’s minister of economy and trade and minister of industry from 1998 to 2000, US Treasuries are a critical pillar of stability, as “holding treasuries allows Saudi Arabia to meet its international payment obligations – finance imports, service external debt, portfolio, and capital flows – provide a buffer against oil revenue shocks, while also generating a steady, low-risk stream of income.”

Saidi pointed to multiple drivers behind these shifts, noting that the rise until September 2024 reflected the Saudi Central Bank, known as SAMA, capitalizing on higher US interest rates, supported by strong oil revenues from the preceding period.

He added that the drop to a six-year low of \$108 billion in

June 2023 followed a significant transfer of funds to the Public Investment Fund, and the subsequent rise reflected Aramco dividend transfers, which “would have some impact on inflows of US dollar into the central bank in 2024.”

Speaking to Arab News, Saidi explained that the decline to \$126.4 billion by February “is likely a combination of factors – expectations that interest rates would stay higher for longer plus a soft landing in the US, portfolio rebalancing away toward higher-yield investments in the backdrop of lower oil production and prices, SAMA withdrawing to meet domestic spending needs / managing liquidity in the banking system,” adding that after a return to stabilization was seen.

For Saidi, the pattern underscores that “SAMA acts as both the traditional central bank, and also actively manages its reserve holdings to accommodate funding needs as per Vision 2030, mainly via the PIF.”

The interplay between SAMA and the PIF is central to understanding the bigger picture. Saidi explained that their mandates are different as SAMA’s role is to provide currency, banking, and financial market stability, dictating conservative policies.

Saidi emphasized that US Treasuries will likely remain the anchor of SAMA’s portfolio due to the dollar peg, but the PIF’s strategy points to greater diversification in the non-reserve segment, with more aggressive investments in private equity, infrastructure, and renewables, as well as artificial intelligence, data centers, technology, and other asset classes.

“Saudi [Arabia] is unlikely to fully abandon the US dollar, despite de-dollarization talks, but expect more diversification and the prospect of a greater role for the Petro-Yuan, given the growing trade and investment links with China, increased holdings in other currencies for trade

purposes, and increased holding of gold as a hedge,” Saidi, who has also served as vice governor of the Central Bank of Lebanon for two successive mandates, said.

He added that people should be prepared for the rollout and increased use of a central bank digital currency, a digital riyal, for cross-border transactions as well in the near future.

Weekly Insights 22 Sep 2020: Looking beyond Saudi inflation & oil exports

Charts of the Week: Saudi inflation numbers (consumer & wholesale prices) show the impact of the tripling of VAT. For now, a proxy indicator of cement sales is showing a pickup post-lockdown, in spite of the VAT hike. We also track the recent changes in Saudi exports, also to understand the impact on government revenues.

1. Saudi inflation picks up post-Jul's VAT hike

% yoy Jul's VAT hike ticks up inflation; food prices a key driver

% yoy Wholesale prices rise sharply as well, with metal products leading the surge

Cement sales have picked up post-lockdown, in spite of the VAT hike

Source: Refinitiv Eikon, GaStat, Argaam, Nasser Saidi & Associates

Headline inflation has been climbing in Saudi Arabia from Jul, not surprising given the VAT hike to 15% (from 5% before). The VAT effect is seen across multiple sub-categories, but note that food prices have been ticking up for many months now. Wholesale prices have also increased, similar to when VAT was initially rolled out in 2018, with metal product prices leading the way: these hikes will also filter down to the end-user.

Household spending will be negatively impacted by the VAT hike ([as seen from recent SAMA data](#)), there seems to be an increase in cement sales – a proxy for the construction sector spending – after the expected dip during the lockdown period. This could be a result of work continuing on mega-projects like NEOM in addition to a boost from the housing market. The surge in mortgage loans this year (+94.4% year-to-date, with the value in Jun 2020 more than three-times compared to Jun 2019) and the announcement that homes priced at SAR 850k and below will not be subject to VAT will support the housing market. Risks of a severe slowdown in government spending and/or delayed payments could however affect near-term demand.

2. Oil sector in Saudi Arabia

The latest trade data from Saudi Arabia shows a drop in overall exports in Q2 this year (-53.6% yoy): oil exports were down by 61.8% yoy, and the share of oil exports fell to 64% in Q2 2020 vs 77.5% in Q2 2019. Partly attributable to the OPEC+ cuts and overall weak global demand for oil (given Covid19), this implies a substantial reduction in government revenues from oil (in 2019, an estimated 63% of total revenues was derived from oil). At the same time, non-oil revenue will also have declined: government's postponement of some taxes and fees will bite into revenues and lockdowns would have negatively affected private sector activity.

Q1 has already posted a budget deficit of SAR 34.1bn, and the IMF estimates (as of June 2020) overall fiscal deficit to widen to 11.4% of GDP this year from 4.5% a year ago. Fiscal consolidation efforts have been a cornerstone of every reform discussion and will likely continue to be – removal of subsidies, reducing public wage bills, raising non-oil revenues – at least in the near-term. This will likely be accompanied by more international debt issuances to finance the deficits, in addition to developing its fledgling local debt market.

The recently released data on world energy from BP shows that though Saudi Arabia is now the second-largest producer of oil globally (behind the US), its proven reserves still account for 17.2% of overall global reserves. But, with the rising rhetoric that oil demand may already have peaked, the pertinent question is whether oil could end up being a stranded asset sooner than later. In this backdrop, with the Covid19 pandemic and a resultant push for climate change policies (before it is too late), it is imperative that the recovery model for Saudi Arabia (and rest of the fuel-exporting nations) includes a strong clean energy policy component within overall reforms, alongside a recasting of its economic diversification model and social contracts.
